| Notes         |                   |      | ※1 Depth of Cut: ap=Axial Depth of Cut / ae=Radial Depth of Cut.<br>※2 We recommend using oil mist coolant.<br>※3 Adjust both spindle speed and feed at the same rate.<br>※4 Adjust milling conditions according to the volume of depth of cut and rigidity of machine.<br>※5 Length of tool overhang must be as short as possible. |       |        |                   |                                   |       |        |                   |                                   |       |        |                   |

MUGEN COATING PREMIUM 2-Flute Ball End Mill with Short Shank for Hardened Steel

Recommended Milling Conditions

Sharp cutting edge reduces cutting load for tough materials.  
Suitable for shrink fit holder

- It fits for Shrink Chuck System.
- It is designed for high speed cutting of hardened steels.

Unit : mm

| Notes         | ※1 Depth of Cut : ap = Axial Depth of Cut / ae = Radial Depth of Cut.<br>※2 We recommend using oil mist coolant.<br>※3 Adjust milling conditions according to the volume of depth of cut and rigidity of machine.<br>※4 Adjust both spindle speed and feed at the same rate.<br>※5 Length of tool overhang must be as short as possible. |        |                   |        |              |                                                   |        |                   |        |              |                                      |        |                   |        |              |

MUGEN COATING PREMIUM 2-Flute Long Taper Neck Ball End Mill

MUGEN COATING PREMIUM 2-Flute Long Taper Neck Ball End Mill

Taper neck to improve tool rigidity.  
Option of same taper angle as inclined working angle

- Taper neck type ball end mill improves accuracy for deep milling.
- Optimized taper neck design and MUGEN COATING PREMIUM realized to show its higher ability for hardened steels.
- Lineup of total 209 size with high versatility 2-flute end mills.
- **I** : Semi-standard item, please inquire for price and delivery.

※Please select the tool with the same neck angle as the inclined angle of the milling surface.

[Neck Shape]  
(γ) is reference value. Tool measurement required in order to avoid interference to the work material.

※Please select the tool with the same neck angle as the inclined angle of the milling surface.

How to Order

When you order, indicate MRBTNH230 (R)×(θ)×(ℓ1).

※(γ) is reference value.

※Please select the tool with the same neck angle as the inclined angle of the milling surface.

Unit : mm

| Code No.       | Radius (R) | Neck Taper Angle ( $\theta$ ) | Under Neck Length ( $\ell_1$ ) | Neck Dia. (d1) | Length of Cut ( $\ell$ ) | Under Neck Length 2 ( $\ell_2$ ) | Neck Taper Angle 2 ( $\gamma$ ) | Effective Inclined Angle ( $\alpha$ ) | Shank Dia. (d) | Overall Length (L) |    |

MUGEN COATING PREMIUM 3-Flute Long Taper Neck Ball End Mill

MUGEN COATING PREMIUM 3-Flute Long Taper Neck Ball End Mill

3-flute with high helix angle and taper neck design for deep area milling with high efficiency

- Higher rigidity brought by taper neck than existing long neck.
- MUGEN COATING PREMIUM because of high heat resistance, realized long tool life for hardened steels.
- High effective machining achieved by NS original 3-flute design.

Unit : mm

Size  $\phi 0.2 \times R0.02 \sim \phi 0.9 \times R0.1$

MUGEN COATING PREMIUM 2-Flute Long Neck Radius End Mill for Hardened Steel

Long neck corner radius end mill  
for prehardened steels and hardened steels(  $\leq 65\text{HRC}$ ).  
Maximum L/D=16

- MUGEN COATING PREMIUM for hardened steels and unique new design excel in chipping prevention and resolve chatterring to realize excellent finished surface.
- Total 97 sizes.

[Neck Shape]  
( $\gamma$ ) is reference value.Tool measurement required in order to avoid interference to the work material.

Unit : mm

## How to Order

When you order, indicate MHRH230R (D)×(R)×( $\ell_1$ ). ※( $\gamma$ ) is reference value.

MUGEN COATING PREMIUM 2-Flute Long Neck Radius End Mill for Hardened Steel

Unit : mm

MUGEN COATING PREMIUM 4-Flute Long Neck Radius End Mill for Hardened Steel

4-flute long neck corner radius end mill  
for prehardened steels and hardened steels(  $\sim 65\text{HRC}$  ).  
Maximum L/D=16

- MUGEN COATING PREMIUM for hardened steels and unique new design excel in chipping prevention and resolve chattering to realize excellent finished surface.
- 4 flutes end mill for higher efficiency.
- Total 336 sizes.

Beware of stocks because there is no blade to the shaft center of end teeth of  $\phi 0.1$  to  $\phi 0.3$ .

[Neck Shape]  
( $\gamma$ ) is reference value.Tool measurement required in order to avoid interference to the work material.

| Size                  | Diameter Tolerance | Corner R Tolerance | Shank Dia. Tolerance |
|-----------------------|--------------------|--------------------|----------------------|

MHRH430R

MUGEN COATING PREMIUM 4-Flute Long Neck Radius End Mill for Hardened Steel

[Neck Shape]  
( $\gamma$ ) is reference value.Tool measurement  
required in order to avoid interference  
to the work material.

MHRH430R

MUGEN COATING PREMIUM 4-Flute Long Neck Radius End Mill for Hardened Steel

(Neck Shape)  
( $\gamma$ ) is reference value.Tool measurement  
required in order to avoid interference  
to the work material.

◆ New Size

Unit : mm

| 4-flute standard type corner radius end mill with helix angle 30°. For multi-purpose from roughing to finishing |                                               |               |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                                                                                       |                 |       |

## MX225

## Recommended Milling Conditions

Unit : mm

**How to Order** When you order, indicate MX225 (D). ※(γ) is reference value.

- ※1 Use cutting fluid.
- ※2 Use cutting fluid with smoke retardant.
- ※3 Recommend to use oil mist coolant for machining hardened steels.
- ※4 Adjust both spindle speed and feed at the same rate.
- ※5 Adjust milling conditions according to the volume of depth of cut and rigidity of the machine.

# MX230

## MUGEN COATING 2-Flute LEAD30 End Mill

## Recommended Milling Conditions

For various work materials.  $L/D=2$ .  
Applicable to both slotting and side milling

$D \leq 3$   $\phi$   $D$   $\begin{matrix} 0 \\ -0.01 \end{matrix}$   
 $3 < D < 6$   $\phi$   $D$   $\begin{matrix} 0 \\ -0.015 \end{matrix}$   
 $D = 6$   $\phi$   $D$   $\begin{matrix} -0.01 \\ -0.025 \end{matrix}$   
 $D > 6$   $\phi$   $D$   $\begin{matrix} -0.01 \\ -0.03 \end{matrix}$

- L/D=2 and helix 30° standard type applicable for both slotting and side milling.

| Code No.       | Dia. (D) | Length of Cut (ℓ) | Neck Taper Angle (γ) | Shank Dia. (d) | Overall Length (L) |

| Notes         | ※1 Use cutting fluid.<br>※2 Use cutting fluid with smoke retardant.<br>※3 Recommend to use oil mist coolant for machining hardened steels.<br>※4 Adjust both spindle speed and feed at the same rate.<br>※5 Adjust milling conditions according to the volume of Depth of Cut and rigidity of the machine.                                                                                                                                                                                                                                                                         |                 |          |                             |                 |          |                               |                 |          |                                                                                                                                                                                                                                                                      |                 |          |                                                                                                                                                       |                 |          |

## Recommended Milling Conditions

Technical drawing of a drill bit. The drawing shows a side view of the drill bit with a cutting edge. The diameter is labeled  $D$ , the total length is labeled  $L$ , and the length of the cutting edge is labeled  $l$ .

- Unit : mm

| Code No.       | Dia. (D) | Length of Cut (ℓ) | Neck Taper Angle (γ) | Shank Dia. (d) | Overall Length (L) |
|----------------|----------|-------------------|----------------------|----------------|--------------------|
| 08-00035-00340 | 3.4      | 10.2              | 12°                  | 6              | 45                 |

Recommended Milling Conditions

For various work materials. L/D=4. For side milling only.

$D \leq 2$

$2 < D < 6$

$D = 6$

$D > 6$

$\phi D \begin{smallmatrix} 0 \\ -0.01 \end{smallmatrix}$

$\phi D \begin{smallmatrix} 0 \\ -0.015 \end{smallmatrix}$

$\phi D \begin{smallmatrix} -0.01 \\ -0.025 \end{smallmatrix}$

$\phi D \begin{smallmatrix} -0.01 \\ -0.03 \end{smallmatrix}$

L/D=4 and helix 40° is suitable for deep machining with minimum deflection of cutting up-right surface.

Unit : mm

How to Order

When you order, indicate MX240 (D).    ※(  $\gamma$  ) is reference value.

Regular Line  
MUGEN COATING  
Full Cutting Length Type

Carbon Steel

Alloy Steel

Prehardened Steel

Stainless Steel

Aluminium Alloy

Copper

Resin

~ 55 HRC  
Hardened Steel

Square

MX240

Size  $\phi$  0.3 ~  $\phi$  12

MUGEN COATING 2-Flute LEAD40 End Mill

Recommended Milling Conditions

For various work materials. L/D=4. For side milling only.

$D \leq 2$

$2 < D < 6$

$D = 6$

$D > 6$

$\phi D \begin{smallmatrix} 0 \\ -0.01 \end{smallmatrix}$

$\phi D \begin{smallmatrix} 0 \\ -0.015 \end{smallmatrix}$

$\phi D \begin{smallmatrix} -0.01 \\ -0.025 \end{smallmatrix}$

$\phi D \begin{smallmatrix} -0.01 \\ -0.03 \end{smallmatrix}$

L/D=4 and helix 40° is suitable for deep machining with minimum deflection of cutting up-right surface.

MUGEN COATING 2-Flute LEAD40 End Mill

Recommended Milling Conditions

For various work materials. L/D=4. For side milling only.

$D \leq 2$

$2 < D < 6$

$D = 6$

$D > 6$

$\phi D \begin{smallmatrix} 0 \\ -0.01 \end{smallmatrix}$

$\phi D \begin{smallmatrix} 0 \\ -0.015 \end{smallmatrix}$

$\phi D \begin{smallmatrix} -0.01 \\ -0.025 \end{smallmatrix}$

$\phi D \begin{smallmatrix} -0.01 \\ -0.03 \end{smallmatrix}$

L/D=4 and helix 40° is suitable for deep machining with minimum deflection of cutting up-right surface.

## MUGEN COATING 4-Flute LEAD30 End Mill

## Recommended Milling Conditions

For various work materials. L/D=2.  
Suitable for side milling with 4-flute

● L/D=2 and helix 30° standard type, applicable to any milling process.

# MX445

Size  $\phi$  1 ~  $\phi$  12

## MUGEN COATING 4-Flute LEAD45 End Mill

For various work materials. L/D=5.  
Suitable for side milling with 4-flute

- L/D=5 and helix 45° to minimize the milling deflection even though the long cutting length design.

Unit : mm

| Code No.       | Dia. (D) | Length of Cut (ℓ) | Neck Taper Angle (γ) | Shank Dia. (d) | Overall Length (L) |

## MUGEN COATING 2-Flute Sharp Edge Short End Mill

Sharp edge type with 2-flute and helix angle 30°

- It is very suitable for high speed cutting due to the length of cut is short and rigid.
- Sharp edge profile guarantees high shearing ability.

Unit : mm

## Recommended Milling Conditions

2-flute with high helix angle 45°. Applicable to tough work materials

- Our original MUGEN COATING has been put on 2-flute end mill.
- Compared with 30° helix angle, it can be reduced cutting load.

## MSE345

## Recommended Milling Conditions

Unit : mm

▲ Discontinued Products

- ※1 Use cutting fluid with smoke retardant.
- ※2 Recommend to use oil mist coolant for machining hardened steels.
- ※3 Adjust both spindle speed and feed at the same rate.
- ※4 Use rigid and precise machine and chuck holder.
- ※5 Adjust milling conditions according to the volume of Depth of Cut and rigidity of the machine.

# MSE430P

Size  $\phi$  1 ~  $\phi$  12

## MUGEN COATING 4-Flute Sharp Edge End Mill

4-flute sharp edge type with helix angle 30°

- It can be cut from nonferrous to steels due to the sharp edges.
- Minimize tool deflection for accurate finishing.

Unit : mm

## MUGEN COATING 4-Flute End Mill

4-flute standard type with helix angle 30°  
For multi-purpose, from roughing to finishing

- Our original MUGEN COATING has been put on 4-flute end mill.
- It can be cut from non-hardened materials to hardened materials.
- ▲ : The sizes will no longer be on sale after the stock runs out.

Unit : mm

| Code No.         | Dia.<br>(D) | Length of Cut<br>(L) | Neck Taper Angle<br>( $\gamma$ ) | Shank Dia.<br>(d) | Overall Length<br>(L) |

MUGEN COATING 4-Flute End Mill

4-flute with high helix angle 45°  
Suitable for side milling of tough work materials

MG

4

45°

Side

Face

● Our original MUGEN COATING has been put on 4-flute end mill.

● Compared with 30° helix angle, it can be reduced cutting load.

● ▲ : The sizes will no longer be on sale after the stock runs out.

Side Milling

Notes

※1 Use cutting fluid with smoke retardant.  
※2 Recommend to use oil mist coolant for machining hardened steels.  
※3 Adjust both spindle speed and feed at the same rate.  
※4 Adjust milling conditions according to the volume of Depth of Cut and rigidity of the machine.

H-049

MUGEN COATING 4-Flute End Mill For Hardened Steel

Recommended Milling Conditions

4-flute with high helix angle. For finishing of prehardened steels and hardened steels (~55HRC)

- Machineable to high hardened steels (48~55HRC).
- Realized high precision finishing without the deflection.

Unit : mm

How to Order

When you order, indicate MHD445 (D). ※( $\gamma$ ) is reference value.

Recommended High Speed Milling Conditions

| Notes                         | ※1 Use a rigid and precise machine and chuck holder.<br>※2 Adjust milling conditions according to the volume of Depth of Cut and rigidity of the machine.<br>※3 Adjust both spindle speed and feed at the same rate.<br>※4 Use oilmist coolant or air blow. |        |                   |        |                                                                                                                                                            |        |                   |        |                                                                                                                                                                                                                     |        |                   |        |

MUGEN COATING 6-Flute End Mill For Hardened Steel

Recommended Milling Conditions

6-flute with high helix angle. For finishing of prehardened steels and hardened steels (~55HRC)

- Machineable to high hardened steels (48~55HRC).
- Realized high precision finishing without the deflection.

Unit : mm

MUGEN COATING 2-Flute Long Ball End Mill

2-flute long ball end mill. Overall length is 150mm at R3

MG

2

30°

3D

- Our original MUGEN COATING has been put on 2-flute long ball end mill.
- The available sizes are from radius 0.1 to 5.
- Take advantage of long shank feature.
- **I** : Semi-standard item, please inquire for price and delivery.

| Depth of Cut (D: Dia.) | <div>Side Milling: 1.5D, 0.1D</div> <div>Slotting: D, 0.3D以下</div> <div>Side Milling: 1D, 0.02D</div> <div>Slotting: D, φ 1~3=0.05D, φ 4~6=0.1D</div>                                                                                           |              |          |                          |              |          |                            |              |          |                                |              |          |
| Notes                  | ※ 1 Adjust feed according to inclined angle.<br>※ 2 When corner machining, reduce the feed by approximately 50%~30%.<br>※ 3 Adjust spindle speed and feed at the same rate also reduce Depth of Cut, if the machine spindle speed insufficient. |              |          |                          |              |          |                            |              |          |                                |              |          |

How to Order

When you order, indicate MSRS230 (D)×(R). ※( γ ) is reference value.

## Recommended Milling Conditions

Unit : mm

When you order, indicate MSRS430 (D)x(R).

Side Milling

- ※ 1 Adjust feed according to inclined angle.
- ※ 2 When corner machining, reduce the feed by approximately 50%~30%.
- ※ 3 Adjust spindle speed and feed at the same rate also reduce Depth of Cut, if the machine spindle speed insufficient.

| Notes         | ※1 Reference value for Alloy and Stainless Steels are 80% of recommended cutting conditions.<br>※2 These recommended cutting conditions indicate just reference. It should be adjusted according to milling shape and machine type.<br>※3 ap:Axial Depth of Cut.<br>※4 Select a cutting fluid appropriate to work material, milling shape and machining content.<br>※5 Coolant supply and chip disposal in the deep portion are very important.<br>※6 Recommend to apply ramping for approaching into axial direction.<br>※7 Recommend reciprocating cutting.<br>※8 Recommend guide slotting process with short neck tool before milling with L/D 5 times or longer neck tool.<br>※9 Reduce both spindle speed and feed at same rate for chattering and also for insufficient spindle speed of a machine.<br>※10 Major adjustment of milling conditions appropriately on milling profile, machine tool and etc. required for the tools smaller than Dia. 0.5mm, or L/D 15 times longer.<br>※11 Major adjustment of milling conditions, e.g. adjust spindle and feed speed at same rate, required on condition of a tool overhang length exceeding a shank diameter 5 times due to possible accuracy impact by chuck runout etc. |                                                                               |        |              |                                                    |        |              |                        |        |              |

- MUGEN COATING has been put on our original end mill for deep rib.
- The Long Neck type is suitable for narrow and deep machining.

| Notes         |                   | ※1 Reference value for Alloy and Stainless Steels are 80% of recommended cutting conditions.<br>※2 These recommended cutting conditions indicate just reference. It should be adjusted according to milling shape and machine type.<br>※3 ap:Axial Depth of Cut, ae:Radial Depth of Cut.<br>※4 Select a cutting fluid appropriate to work material, milling shape and machining content.<br>※5 Coolant supply and chip disposal in the deep portion are very important.<br>※6 Recommend to apply herical or ramping for approaching into axial direction.<br>※7 Reduction of feed and Depth of Cut to reduce machining load around side wall.<br>※8 For slotting, recommend reciprocating milling by adjusting feed at 80% of recommended milling conditions as a reference value.<br>Recommend guide slotting process with short neck tool before milling with L/D 5 time or longer neck tool.<br>※9 Reduce both spindle speed and feed at same rate for chattering and also for insufficient spindle speed of a machine.<br>※10 Major adjustment of milling conditions, e.g. adjust spindle and feed speed at same rate, required on condition of a tool overhang length exceeding a shank diameter 5 times due to possible accuracy impact by chuck runout etc. |        |              |       |                                                    |        |              |       |

| Notes         |                   | ※1 Reference value for Alloy and Stainless Steels are 80% of recommended cutting conditions.<br>※2 These recommended cutting conditions indicate just reference. It should be adjusted according to milling shape and machine type.<br>※3 ap:Axial Depth of Cut.<br>※4 Select a cutting fluid appropriate to work material, milling shape and machining content.<br>※5 Coolant supply and chip disposal in the deep portion are very important.<br>※6 Recommend to apply ramping for approaching into axial direction.<br>※7 Recommend reciprocating cutting.<br>※8 Recommend guide slotting process with short neck tool before milling with L/D 5 time or longer neck tool.<br>※9 Reduce both spindle speed and feed at same rate for chattering and also for insufficient spindle speed of a machine.<br>※10 Major adjustment of milling conditions appropriately on milling profile, machine tool and etc. required for the tools smaller than Dia. 0.5mm.<br>※11 Major adjustment of milling conditions, e.g. adjust spindle and feed speed at same rate, required on condition of a tool overhang length exceeding a shank diameter 5 times due to possible accuracy impact by chuck runout etc. |        |              |                                                    |        |              |                        |        |              |

MUGEN COATING 2-Flute Long Neck Ball End Mill

Standard type long neck ball end mill. Sufficient variations with 282 sizes

● The Long Neck type is suitable for narrow and deep machining.

● It is possible to have deep and precision three-dimensional cutting in the low to high speed range.

● Total 282 sizes!

| Code No.       | Radius (R) | Under Neck Length (ℓ1) | Length of Cut (ℓ) | Dia. (D) | Neck Dia. (d2) | Neck Taper Angle (γ°) | Shank Dia. (d) | Overall Length (L) | Actual effective length depending on inclined angle of workpiece |      |       |      |      |

# MRB230SF

## MUGEN COATING 2-Flute Long Neck Ball End Mill with Short Shank

- It fits for shrink chuck system.

Unit : mm

| Code No.       | Radius (R) | Under Neck Length (ℓ <sub>1</sub> ) | Length of Cut (ℓ) | Dia. (D) | Neck Dia. (d <sub>2</sub> ) | Neck Taper Angle (γ) | Shank Dia. (d) | Shank Length (ℓ <sub>2</sub> ) | Overall Length (L) | Actual effective length depending on inclined angle of workpiece |      |       |      |      |

MUGEN COATING 2-Flute Long Taper Neck Ball End Mill

MUGEN COATING 2-Flute Long Taper Neck Ball End Mill

Taper neck to improve tool rigidity. L/D up to 36.  
Option of same taper angle as inclined working angle

R < 0.25  
R ≥ 0.25

R ± 0.005  
R ± 0.01

It is possible to increase rigidity with the neck taper.  
The volume of depth of cut will be more than conventional end mills.

Effective Inclined Angle α

MUGEN COATING 2-Flute Long Taper Neck Ball End Mill

MUGEN COATING 2-Flute Long Taper Neck Ball End Mill

Taper neck to improve tool rigidity. L/D up to 36.  
Option of same taper angle as inclined working angle

R < 0.25  
R ≥ 0.25

R ± 0.005  
R ± 0.01

It is possible to increase rigidity with the neck taper.  
The volume of depth of cut will be more than conventional end mills.

Effective Inclined Angle α

| Notes         | ※1 When deciding milling condition in case the effective length is long and/or the neck taper angle is small, it is recommended both axial depth of cut and radial depth of cut values are chosen at lower level within the specified range.<br>※2 Adjust both spindle speed and feed at the same rate.<br>※3 Use cutting fluid with smoke retardant.<br>※4 We recommend using oil mist coolant for hardened steels. |                   |                                                                           |       |        |                   |

## MUGEN COATING 2-Flute Long Neck Radius End Mill

The MG logo is shown in a black square. To its right are three icons: a square with a circular arrow and the number 2, a square with '30°' and a cross-section of a fillet, and a square with 'Corner R', a fillet symbol, and the text '±0.005 (0 ≤ z, 5)'. Below these are three icons for 'Side', 'Slot', and 'Face' features, each with a corresponding 3D model of a part.

- $D > 2.5$   $R \pm 0.01$
- 
- Suppress chattering by point milling (Dia. ~2.5)
- General End mill
- Actual Effective Length
- Inclined Angle

Unit : mm
